

Flash MPX SD - Video player

Solid state audio and video player. SD card, Compact Flash or USB flash memory.

The Flash mpx SD broadcasts audio and video files stored on a SD card, Compact Flash card or USB flash memory. It is a solid state device that will give you years of trouble free operation.

Flash MPX SD read standard DVD (.vob) and Mpeg2 files, still images (jpeg) and wav / MP3 audio files.

Built in 3 inputs (up to 7 with combined mode) are available for direct connection to push buttons and sensors. Inputs are programmable to play selected audio/video files and the player is configured to provide a very fast reaction time so that the video/audio playback is instantaneous.

You will use the integrated 2x14W audio stereo amplifier for most of your applications. Just connect speakers on 4 screw on terminals at rear of the player. In front, you can adjust the volume using the knob.

Avec son amplificateur intégré, vous pourrez connecter une paire de haut-parleurs et régler le volume par le bouton en façade.

The Flash MPX SD displays video on a TV screen or any video screen with a composite video or VGA input. You can use standard pixel (4X3) and Wide Screen (16X9).

The RS485 link provide a full interactive interface to control the player from a computer or other all other automation and drives.

Some examples of use:

- Interactive video displays in museums, exhibitions, art galleries...
- Information kiosks in public places, tourist offices, waiting halls, shopping malls...
- Interactive video desks in theme parks, leisure centers, zoos...
- Place of purchase advertising in shops and shop windows.
- Property video presentation for estate agents.
- Attractive interactive video catalogue for tour operators and travel agents.
- To generate special video effects in castles haunted houses, merry-go-rounds...
